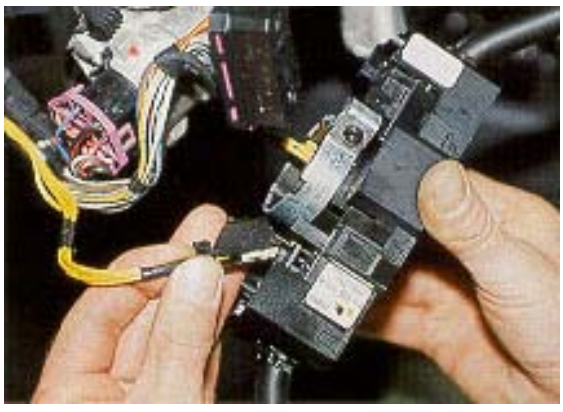
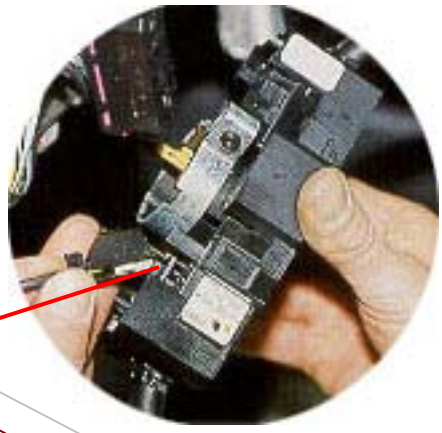
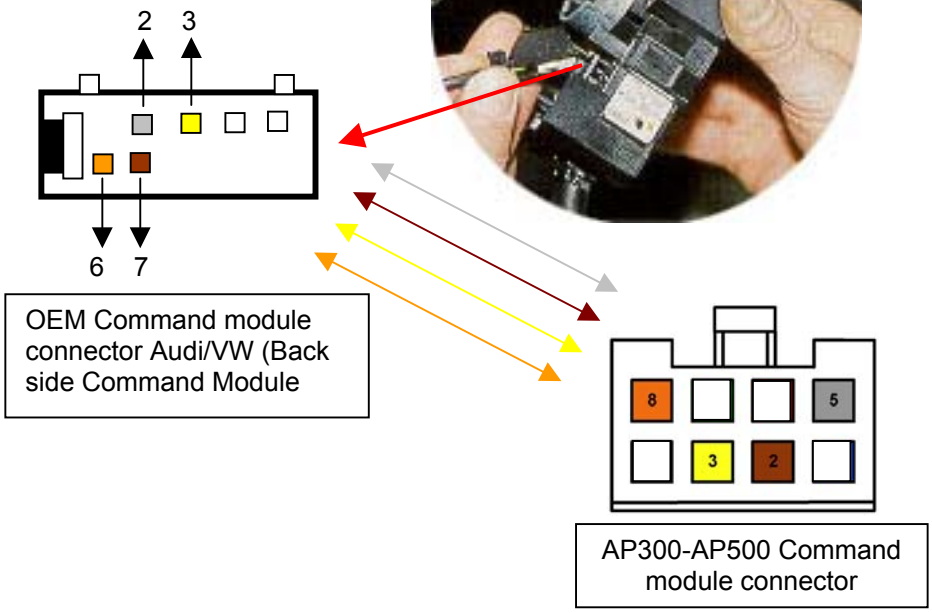
INSTALLATION MANUAL OEM-VW COMMAND MODULE
IN COMBINATION WITH AN AP300-AP500







1. KEYBOARD INITIALIZATION MODE OPERATION

The keyboard initialization mode is only required if you change the command module keyboard from the factory supplied unit or wish to change the factory default accel command from the default **SET/ACCEL** to **SET/DECEL.**

To enter the Keyboard Initialization Mode, press and hold the **S1**(blue button) key located on the Electronics Module PC Board for 4 seconds. The Electronics module will respond with 5 Hi tone beeps.

Press the **RES** button on the command module to instruct the cruise control to operate in the **SET/DECEL** mode. The Electronics module will respond with 2 low tone beeps and exit the Keyboard Initialization mode.
